

Week 2 – Activity 1

- a) Then add a script tag before the closing `</body>` tag and between the script tags create two variables. Assign your first name to one and your last name to the other, then using a comma (,) make JavaScript display a string with the value of each variable in the console as:

Console display

- b) Use plus signs (+) to display in the console, a one line message that starts with *Full name:* concatenated with the two variables, your first name and last name, created in step a)

- c) Add one more variable called "adjective" and assign it a value that describes you. Use the console to display a sentence that includes all three variables. This time use a template literal (tick marks, and `${}` around variables).
